

WENDIMU TSS™

Training Support System™

Helps people become more productive

WENDIMU Training Support System (TSS) is a Web-based Management System that provides **complete solutions** for managing and tracking all types of training at your organization — from e-Learning courses to traditional classroom training and self-paced study programs. The TSS includes extensive testing and assessment tools, reporting, management, communication and collaboration tools, and quality control capabilities — all in one integrated database driven application that is highly scalable to meet your organization’s needs. The WENDIMU TSS Module also makes planning an onsite training event easy. Once you create a classroom entity, you are able to designate dates and times, audiences, manage classroom status, maximum and minimum class enrollments, calendar and scheduling features, materials, and more.

Features

Management & Reporting is the central element of a TSS. The TSS Management Systems includes many administrative features and hundreds of standard reports that allow you to keep track of learners individually, monitor entire classes, and utilize multiple training programs quickly and easily! With TSS you can:

- Manage and track e-Learning courses, classroom training, self study programs, and other types of events
- Utilize extensive reporting to ensure that users are achieving maximum benefit from their learning activities
- Corporate reporting allows larger organizations to easily keep track of their training along departmental lines
- Enter and edit students and classes
- Manage training resources: subjects, trainers, classrooms, budget
- Install and control access to courses
- Use pre-tests and post-tests to measure learning gains
- Track amount of time spent in courses

Competency Management is a way of categorizing specific skill sets of individuals within a company or organization and mapping them to job roles and learning events.

Class Page may consist of announcements, lessons, bios, manuals, notes, assignments, etc. In fact, any kind of document/file can be published to the “Class Page” by defining a posting category administratively and then uploading a file to the designated “Class Page.”

HR Data Interface: The WENDIMU TSS has a data loader utility, that automatically loads data and has a built-in ‘HR Data Interface’ data-input format for system-to-system batch updates.

Alerts System : You can build specified alerts profile based on the start and end dates of training events, when a user has passed a course, or when a recertification period is approaching.
